

Timico is committed to protecting the environment and endeavour to reduce our environmental footprint arising from our services, activities and products.

Our business

Founded in 2004, Timico is a Managed Cloud Service Provider supplying a range of managed IT, network connectivity, cloud and hosting, voice services and mobile solutions to the commercial mid-market. Our team is based in three locations throughout the United Kingdom: Newark, London and Winnersh.

Our impacts

We are committed to reducing the negative environmental impacts of our own services, activities and products, in particular those relating to:

- Our data centre: computing equipment, energy usage, water usage, and waste
- Our offices: water usage, energy usage and waste
- Our products and services: carbon footprint, customer equipment and the goods and services we choose for our offices: cleaning, furniture, stationary, IT equipment
- Our suppliers: travel, equipment, waste
- Our business: travel and those of our commuting staff

Our commitments

We are actively committed to being and remaining a sustainable business. Timico always strives for energy efficient computing.

The key areas of focus for reducing our impacts are:

Our data centre

- Utilising virtualisation for a multitude of technologies which include Virtual Desktops for our Network Operations Centre, Virtual Servers for our hosting business and customer solutions on our Public Cloud
- Reducing power wastage from underutilised systems and cooling costs compared with their physical equivalents. This is achieved through virtualisation. This is mainly due to the ability to consolidate workloads which require far fewer servers
- Using a centrally-controlled integrated building management system that controls and reports the building's HVAC (heating, ventilating and air conditioning) system status; this allows our data centre to be temperature controlled which lowers energy wastage
- Using the latest design principles to minimise power consumption, generate customer savings and improve our carbon footprint. This includes cold aisle containment which reduces the volume of cold air required and contributes to a target Power Usage Effectiveness (PUE) of 1.2.

Our offices

- Training staff on the use of resources, with the aim to promote the recycling of paper, products, and equipment
- Reducing electricity consumption through the installation of auto power-off lights within our offices; turning off computers at the end of the day and replacing existing light bulbs with energy efficient ones
- Regulating heating and cooling by thermostats, to curtail energy wastage

- Operating a centrally-controlled comfort cooling system which automatically turns the air-conditioning requirement off at given times during the day and weekend, thereby curtailing energy wastage
- Lowering paper consumption by sending a minimal amount of our invoices in paper format; instead we deliver invoices via e-mail or to portals. This is an area in which we are constantly working with our customers to further reduce
- Recycling office and customer paper waste by shredding; this reduces environmental impact – every ton of paper recycled can save 4,000 kw of energy, 26,498 litres of water and 17 trees. Every document securely destroyed is recycled, improving our organisation’s environmental footprint as well as preventing data theft
- Lowering paper consumption by promoting correspondence via e-mail instead of by traditional post and requesting the recipient to consider the environment before printing the message
- Use of Hydro Taps within our office kitchens for energy efficiency and a reduction in water wastage.

Our products and services

- Choosing suppliers who are recognised as being driven to lower their environmental impact through recycling, waste management or travel management
- Recycling electrical equipment by use of a WEEE skip, which meets current legislation; re-selling mobile equipment to companies for re-use and donating computers and IT equipment to charity.

Our business travel

- Reducing our carbon footprint from travel by promoting a bike to work scheme, teleconferencing, use of public transportation and staff car pools.

We are committed to understanding, managing and improving our environmental performance, ensuring that we meet all environmental legislation that relates to our business.

Timico’s Environmental Working Group meets quarterly to support the policy and develop, monitor, review and update an Environmental Action Plan. This plan is forwarded to the Board for approval.

Our Environmental Policy and Action Plan is reviewed on an annual basis by our Board and updated as and when necessary. Quarterly updates are reported internally in a monthly Timico newsletter, to ensure communication and engagement with staff on environmental issues and to communicate environmental performance and progress. Environmental review is discussed during quarterly Quality Management Reviews, which are attended by upper management and conducted by the Compliance Manager.
